Project

CAMPUSMART

- Full-Stack T&P Portal developed on the MEAN stack (Node.js/Angular) to fully automate and digitize the college's placement workflow.
- Integrated Google Gemini AI to power a Smart ATS that performs semantic analysis and scores uploaded resumes against job descriptions.
- Features a Grounded AI Chatbot (using RAG principles) that provides students with instant, factually accurate answers sourced directly from official placement data.
- Secured the system using JWT and bcrypt for robust authentication, while utilizing Nodemailer for efficient, targeted bulk email communication**.**

Crop Cultivation System

- Developed a web-based system using Flask and Python to recommend crops based on soil and environmental parameters.
- Integrated ML models like Random Forest, SVM, trained on datasets including pH, rainfall, temperature, and nutrients.
- Implemented user authentication and a “Crop Cultivation System” dashboard to track crop performance, inputs, and soil health.
- Built a feedback module for user suggestions and continuous system improvement.
